```

check out new variable

```
summary(total$both)
```

```
##      Length      Class      Mode
##      5114 character character
```

I tried so many versions of the above code without success. Although this created a new variable (it seems), it is not correct. I think all were coded as NO

Now to move on with modeling

first divide dataset into a training and test set based on random uniform number on fixed seed (project assignment date)

```
set.seed(20170329)
#create new variable group that is a random sample
total$group <- runif(length(total$H4ID5H), min = 0, max = 1)

summary(total)
```

Females are 1.3x as likely to be diagnosed with depression than males.

For every unit change in being depressed in the past week, the log odds of depression

increases by 2.4 (most or all the time), 2.0 (a lot of time), 1.2 (sometimes)

Number of sexual partners doesn't seem to be associated in model 1
